

Ground beetles (Coleoptera: Carabidae) from pastures in Southern Bulgaria

Teodora Teofilova*, Ivaylo Todorov, Milka Elshishka, Vlada Peneva

*e-mail: oberon_zoo@abv.bg

Habitat

10 actively grazed pastures

Thracean Lowland: near the villages of Malak Chardak, Kostievo, Stryama, Momino Selo, Dobrich and Stalevo

Sarnena Sredna Gora Mts.: near the village of Zelenikovo

Captured beetles belonged to **90 species** and **33 genera**, representing 12% of the species and 26% of the genera in Bulgaria

The most diverse was genus *Harpalus* (22 species), followed by the genera *Amara* (7 species), *Microlestes* (6 species), *Ophonus* (6 species) and *Parophonus* (5 species).

Microlestes minutulus was a constant species occurring in all sampling sites.

New species for the Thracian Lowland:

Amara fulvipes, *Anisodactylus binotatus*, *A. intermedius*, *Apotomus clypeonitens*, *Calathus cinctus*, *Carterus gilvipes*, *Gynandromorphus etruscus*, *Harpalus fuscicornis*, *H. subcylindricus*, *Microlestes apterus*, *M. corticalis*, *M. fulvibasis*, *M. maurus*, *M. minutulus*, *Notiophilus laticollis*, *Pangus scaritides*, *Parophonus laeviceps*, *P. planicollis*, *Polystichus connexus* and *Pterostichus strenuus*

New for the whole Sredna Gora Mts.:

Acinopus picipes, *Acinopus megacephalus*, *Amara anthobia*, *Ditomus calydonius*, *Harpalus albanicus*, *H. angulatus*, *H. attenuatus*, *H. dimidiatus*, *H. flavigornis*, *H. pumilus*, *H. pygmaeus*, *H. subcylindricus*, *H. tardus*, *H. signaticornis*, *Lebia scapularis*, *Microlestes fissuralis*, *M. fulvibasis*, *M. maurus*, *M. minutulus* and *Ophonus sabulicola*

New for the Sredna Gora: another 41 species

Model organisms

Ground beetles
(Coleoptera: Carabidae)

Results

Captured beetles belonged to **90 species** and **33 genera**, representing 12% of the species and 26% of the genera in Bulgaria

The most diverse was genus *Harpalus* (22 species), followed by the genera *Amara* (7 species), *Microlestes* (6 species), *Ophonus* (6 species) and *Parophonus* (5 species).

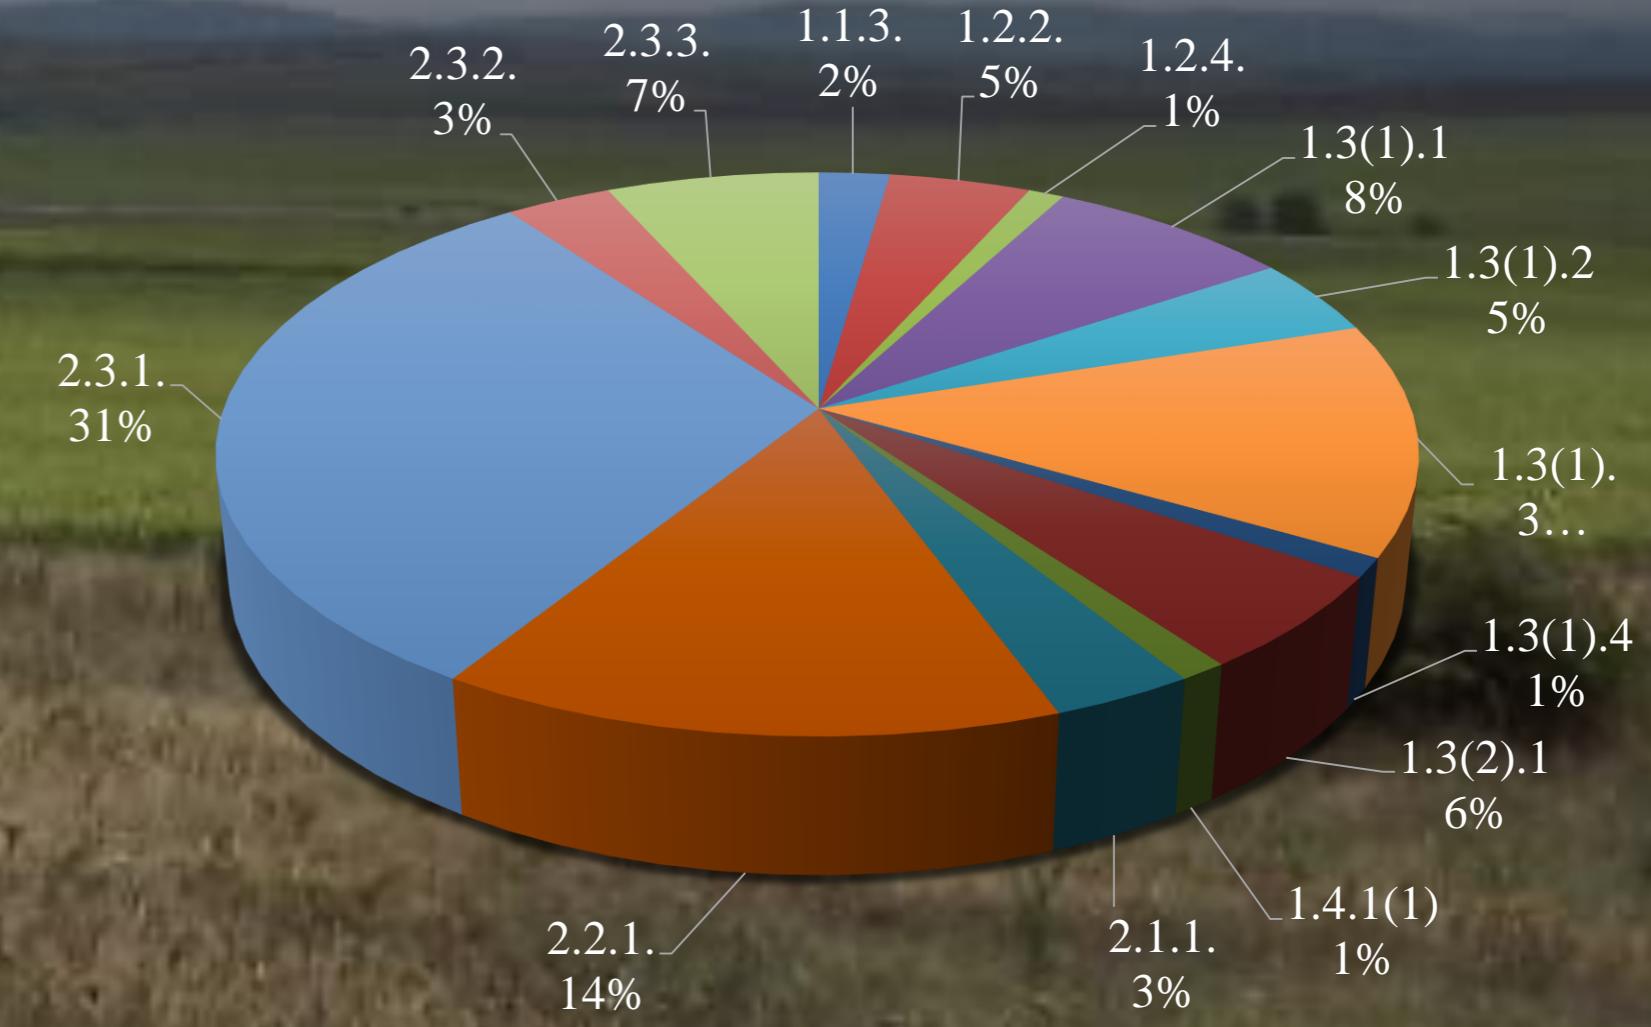

Microlestes minutulus was a constant species occurring in all sampling sites.

New genera :

Apotomus, *Gynandromorphus*,
Pangus and *Polystichus* – new for
the for Thracian Lowland
Acinopus and *Ditomus* – new for
the Sredna Gora Mts.

Life forms

Fourteen life form categories were established (9 zoophagous and 5 mixophytophagous) with a predominance of the mixophytophages (53 species; 59%) over the zoophages (37 species; 41%)

Zoophagous:

Life form subclass: 1.1 – Phytobios; 1.2 – Epigeobios; 1.3 – Stratobios; 1.4 – Geobios.
Life form groups: 1.1.3 – leaf-dwelling dendrohortobionts; 1.2.2 – large walking epigeobionts;
1.2.4 – flying epigeobionts; 1.3(1) – series crevice-dwelling stratobionts; 1.3(1).1 – surface &
litter-dwelling; 1.3(1).2 – litter-dwelling; 1.3(1).3 – litter & crevice-dwelling; 1.3(1).4 –
endogeobionts; 1.3(2) – series digging stratobionts; 1.3(2).1 – litter & soil-dwelling; 1.4.1(1) –
narrow-headed running & digging geobionts.

Mixophytophagous:

Life form subclass: 2.1 – Stratobios; 2.2 – Strathortobios; 2.3 – Geohortobios.
Life form groups: 2.1.1 – crevice-dwelling stratobionts; 2.2.1 – strathortobionts; 2.3.1 –
harpaloid geohortobionts; 2.3.1(1) – crevice-dwelling harpaloid geohortobionts; 2.3.1 –
harpaloid geohortobionts; 2.3.2 – zabroid geohortobionts; 2.3.3 – dytomeoid geohortobionts.

The present study was carried out thanks to the financial aid and in parallel with the implementation of the Project BiodivERSA-FACCE2014-47 "SusTaining AgriCultural ChAnge Through ecological engineering and Optimal use of natural resources (STACCATO)"
